Dear Hiring team,

It is my pleasure to recommend Bolívar Enrique Solarte Pardo to join your team. When I started to introduce the detail about his works, he can catch the key-point of the project immediately; based on his clear concept on automatic control. Although he is not familiar on structure vibration mechanics & the operation detail of business controller, he still can involve in the situation soon after I explained to him, I think that is an essential capability for a good mechanical engineer.

Another point that impressed me is his programing capability. He is familiar with the C# and matlab. During his internship, I assign some works for him, such as development of optimization method by genetic algorithm and Gradient algorithm on structure modal parameter & controller parameter setting. He was able to implement the detail of the algorithm after I explained the project outline to him, he really helps me a lot on improvement the developing efficiency and speed.

To sum up, I really recommend him joining your team because of his positive attitude & professional performance. If you have any question, please do not hesitate to contact me by email at lweichen@itri.org.tw.

Sincerely yours,

Morris Wang
